

## Corporate Bio

LUXIM Corporation is a high volume lighting product manufacturer supplying the consumer electronics industry and is the world's leading designer and supplier of LIFI™ lighting products. Headquartered in Sunnyvale, California, LUXIM has corporate, sales and manufacturing activities in the Silicon Valley and China and staffs a sales office based in Tokyo, Japan.

Founded in 2000, LUXIM began its mission to bring the benefits of Light Fidelity™ to projection display by commercializing RF (Radio Frequency) plasma lighting technology. The company's founders invented and patented a method by which RF energy can be used to power a light emitting gas plasma capsule and thus made possible unprecedented levels of reliability and flexibility for high intensity lighting. With the advent of LIFI™ technology, high intensity illumination products like projection TV (PTV) and projectors have become possible with long stable lifetime, high quality white light spectrum and great ease of implementation. With an executive team composed of industry leaders from electronics, lighting, optics and high volume manufacturing, LUXIM has established itself as a visionary company in new lighting technology.

Today, LUXIM manufactures LIFI™ for global OEM customers in fast growing, high-tech applications like rear projection television, projection display, digital signage, and other demanding lighting applications.

LUXIM has developed a broad intellectual property portfolio applied to LIFI™ and lighting technology. Furthermore, LUXIM has made significant engineering and design contributions in the areas of projection, information display and lighting application.

A privately held company, LUXIM's investments in ground-breaking lighting technology are funded by premier venture capital firms Sequoia Capital and Worldview Technology Partners.
